INDICATIONS & CONTROLS	Visual Indications (Front panel) Test Mode	10-segment tri-color Bar Graph for load level display. 10-segment Bar Graph for battery charge level display. "Output OK", "Output Fail" and "Standby" status lamps. "Input OK" and "Input Fail" status lamps. "On Batt " status lamp. "Batt Passed" and "Batt Failed" lamps for battery self-test. "Low Batt" warning lamp. "Overload Shutdown" status lamp. "Overtemp warning" and "Overtemp Shutdown" lamps.  When test mode is invoked by pressing the push-button on the front panel, the UPS performs battery impedance testing without interrupting the output power (even if the battery fails) utilizing a proprietary time-sharing circuit. The test results are displayed on the panel indicators. End-to-End testing of the UPS is accomplished by cycling the INPUT UPS/BY-PASS switch on the front panel.
	Audible Alarm	The UPS will beep when it operates on battery power or during over-temperature condition. The alarm may be silenced by pressing the "Alarm Off" push-button on the front panel.
	Power Switches	The M359 has three double-pole power relays, one on the input, one on the output and a third relay that bypasses the UPS section.  The front panel switches allow the user to control these three power relays.
	Remote Control	Connector J4 on the back panel, allows the controlling of the M359 by a remote 28Vdc/0.25A single pole, On/Off switch (Remote Power On/Off) and a 28Vdc/0.25A, ON-ON, single pole switch (Remote UPS/By-Pass Select).

INTERFACE	Discrete interface	Four dry contacts indicating the following conditions:  "UPS ON" (Output OK)  "Battery Voltage Low"  "Input Power Loss" (Battery Operation)  "Fault Detect"  A "Shutdown" input (via opto-isolator) for remote shutdown of the UPS during AC input fail. When the AC input recovers the UPS will automatically turn ON.
	Ethernet SNMP Port	RJ-45, CAT-5 SNMP v1, v2 or v3 Port with Server/ Client Monitor Software. Allows monitoring of the UPS (using MIBs). Supports user defined event-triggered shutdown. Supports different shutdown timing for each Client in the net. Supports delay UPS shutdown (after the Server has been shut down).
	Serial Interface	Optional (instead of Ethernet) RS-232 Serial port (EIA-RS-232).  The serial port allows transmission of status and reception of User-Programmable Options, some of which are described below:  Status: Input OK, Output OK, On Battery, Low Battery, Over-Temperature Warning, Battery Test Passed/Failed, Load Level, Charge Level, status of all User Programmable Options and failure diagnostic.  Commands: UPS Shutdown, UPS Standby, Initiate Battery Test, Enable/Disable Periodic Battery Test, Enable/Disable Battle Mode, Enable/Disable Aural Alarm, Set Input power Limit (see Note 2), Protection Reset (resets all latching protection circuits), System Reset (forces all User Programmable Options into their default state and resets all latching protection circuits).  For the complete set of the available Status messages and Commands, refer to the M120BA-1A Software Interface Manual. (Available at http://www.milpower.com).
SCREENING		Each unit is subjected to a Power Burn-in of 24 hours. Additional ESS is available upon request
ACOUSTIC NOISE		Less than 54dBA.
FUNGUS		Does not support fungus growth, in accordance with the guidelines of MIL-STD-454, Requirement 4.
WEIGHT and SIZE		140 Pounds. (88 Pounds without the Battery Pack.) 19", 3-U, 22" deep, Rack mount or Hard mount.

### **Notes**

- 1. The Neutral Grounding Link is accessible to the user and may be removed to obtain a floating output (not recommended, may result in a safety hazard).
- 2. At ambient temperature above 45°C, the maximum steady-state output power should be derated from 2KW at 45°C to 1.8KW at 55°C. For short term loading (less than 5 minutes) no derating is required.
- 3. The non-operating temperature of the Battery Pack is -20 to +72°C therefore UPS with the Battery Pack installed should not be stored below -20°C. Storing the UPS with the Battery Pack at high temperature for prolonged duration will shorten the battery life.
