FUNCTIONS AND SIGNALS

INHIBIT signal

The **INHIBIT** signal is used to turn the power supply ON and OFF.

TTL "1" or OPEN – will turn on the power supply (For normal operation leave this signal unconnected).

TTL "0" or short– will turn off the power supply.

This signal is referenced to the **SIGNAL RTN**.

SYNC signal

The **SYNC** signal is used to allow the power supply frequency to sync with the system frequency.

The system frequency should be 250 kHz ± 10 kHz.

When not connected the power supply will work at 250 kHz ± 10 kHz.

This signal is referenced to the **SIGNAL RTN**.

SIGNAL RTN

The **SIGNAL RTN** is used as grounding for all signals.

This pin is referenced to the **VIN RTN**.
